VISION AND MISSION

Vision and Mission of the University

Vision

To develop enlightened citizenship of a knowledge society for peace and prosperity of individuals, nation and the world, through promotion of innovation, creative endeavors, and scholarly inquiry.

Mission

To serve as a beacon of change, through multi-disciplinary learning, for creation of knowledge community, by building a strong character and nurturing a value-based transparent work ethics, promoting creative and critical thinking for holistic development and self-sustenance for the people of India. The University seeks to achieve this objective by cultivating an environment of excellence in teaching, research and innovation in pure and applied areas of learning.

Juna 13/9/21 Januar 13/09/204 A Mentes (in 2021

1. BACKGROUND

1.1. NEP-2020 and LOCF an integrated Approach

Considering the curricular reforms as instrumental for desired learning outcomes, all the academic departments of Central University of Haryana made a rigorous attempt to revise the curriculum of undergraduate and postgraduate programmes in alignment with National Education Policy-2020 and UGC Quality Mandate for Higher Education Institutions-2021. The process of revising the curriculum could be prompted with the adoption of "Comprehensive Roadmap for Implementation of NEP-2020" in 32nd meeting of the Academic Council of the University held on April 23, 2021. The Road map identified the key features of the Policy and elucidated the Action Plan with well-defined responsibilities and indicative timeline for major academic reforms.

The process of revamping the curriculum started with the series of webinars and discussions conducted by the University to orient the teachers about the key features of the Policy, enabling them to revise the curriculum in sync with the Policy. Proper orientation of the faculty about the vision and provisions of NEP-2020 made it easier for them to appreciate and incorporate the vital aspects of the Policy in the revised curriculum focused on 'creating holistic, thoughtful, creative and well-rounded individuals equipped with the key 21st century skills' for the 'development of an enlightened, socially conscious, knowledgeable, and skilled nation'.

With NEP-2020 in background, the revised curricula articulate the spirit of the policy by emphasising upon—integrated approach to learning; innovative pedagogies and assessment strategies; multidisciplinary and cross-disciplinary education; creative and critical thinking; ethical and Constitutional values through value-based courses; 21st century capabilities across the range of disciplines through life skills, entrepreneurial and professional skills; community and constructive public engagement; social, moral and environmental awareness; Organic Living and Global Citizenship Education (GCED); holistic, inquiry-based, discovery-based, discussion-based, and analysis-based learning; exposure to Indian knowledge system, cultural traditions and classical literature through relevant courses offering 'Knowledge of India'; fine blend of modern pedagogies with indigenous and traditional ways of learning; flexibility in course choices; student-centric participatory learning; imaginative and flexible curricular structures to enable creative combination of disciplines for study; offering multiple entry and exit points initially in undergraduate

We Mehtor (04 2021) Manual 13/19/2014

4

programmes; alignment of Vocational courses with the International Standard Classification of Occupations maintained by the International Labor Organization; breaking the silos of disciplines; integration of extra-curricular and curricular aspects; exploring internships with local industry, businesses, artists and crafts persons; closer collaborations between industry and higher education institutions for technical , vocational and science programmes; and formative assessment tools to be aligned with the learning outcomes, capabilities, and dispositions as specified for each course. In case of UG programmes in Engineering and Vocational Studies, it was decided that the departments shall incorporate pertinent NEP recommendations while complying with AICTE, NBA, NSQF, International Standard Classification of Occupations, Sector Skill Council and other relevant agencies/sources. The University has also developed consensus on adoption of Blended Learning with 40% component of online teaching and 60% face to face classes for each programme.

The revised curricula of various programmes could be devised with concerted efforts of the faculty, Heads of the Departments and Deans of Schools of Study. The draft prepared by each department was discussed in series of discussion sessions conducted at Department, School and the University level. The leadership of the University has been a driving force behind the entire exercise of developing the uniform template and structure for the revised curriculum. The Vice Chancellor of the University conducted series of meetings with Heads and Deans to deliberate upon the vital parameters of the revised curriculum to formulate a uniform template featuring Background, Programme Outcomes, Programme Specific Outcomes, Postgraduate Attributes, Structure of Masters Course, Learning Outcomes, Teaching-Learning Process, Blended Learning, Assessment and Evaluation, Keywords, References and Appendices. The experts of various Boards of Studies and School Boards contributed to a large extent in giving the final shape to the revised curriculum of each programme.

To ensure the implementation of curricular reforms envisioned in NEP-2020, the University has decided to implement various provisions in a phased manner. Accordingly, the curriculum may be reviewed annually.

1.2. About the Subject

Geography is the study of the Earth (specifically, its surface) in relation to man, and it aims to analyze and comprehend various physical and human phenomena, from the spatial

We Mehtor (2021 Manual 13/9/21)

perspective. It studies where objects are located, why they are there, and how they form and alter over time. It seeks to describe the variable character of the earth.

Geography, through its branches deals with a plethora of physical and human features, phenomena and processes taking place on the surface of the earth. Geomorphology studies landforms, geomorphic processes, landform genetics and evolution and stands crucial in the areas of regional planning, hazard management, urbanization, infrastructure development and mineral exploration. Climatology focuses upon the atmospheric constituents and their dynamics across the areas of distribution, and on the meteorological aspects of a place. This is highly useful in the context of environmental management and addressing the contemporary issues including climate change, global warming, sea-level changes, and human induced climatic phenomenon like urban heat island effects, urban flooding etc. Oceanography relates to the understanding of ocean water dynamics, studying the oceanic habitats and to sourcing of the mineral, energy and food resources from the oceans. Environment, flora and fauna are the main concern of the branch of biogeography. Various branches of human geography include economic geography, social geography, cultural geography, political geography, population geography, settlement geography, medical geography, anthropogeography and historical geography which analyze and explain the spatial aspects of their respective themes. Cartography, statistical analysis of geographical phenomena, and quantitative analysis of geographical phenomena are examples of traditional geographic techniques, while geoinformatics (remote sensing, GIS, and GNSS) is an example of a new geographic technique.

Application of the geographical knowledge and skill to the resolution of the realworld problems is recently gaining attention but not a new thing, *per se.* Geography is as old as man himself, but its academic age is limited to the last few centuries. In twentieth century, geography saw a transition from an exceptional, descriptive regional field of enquiry to an analytical discipline with wide interdisciplinary outlook; a multifaceted field of enquiry that encompasses not only a broad range of physical and life sciences, but also social sciences. For this integration geographers gain thorough knowledge of a broad range of subjects such as history, economics, politics, sociology, society, statistics, and so on. Geoinformatics has recently aided the transformation of geography into an applied discipline. As a result, geographers have evolved into problem-solvers that deal with social, fiscal, and environmental issues all around the world. They are the best planners and managers because of their ability to visualize structures and phenomena.

1.3. About the Programme (Nature, extent and aims)

1.3.1. Nature and extent of the Programme

The post-graduate Geography course, developed in accordance with the learning outcomebased curriculum system (LOCF), includes both fundamental and applied considerations. The course is designed in such a way that essential and foundational knowledge stands supplemented by lessons of applied interest, all while taking place in consideration with the modern geographical dynamics.

Instead of continuing the previous curriculum, LOCF suggests an alternative solution to enhancing higher education quality by identifying milestones in terms of outcomes (knowledge, understanding, skills, attitudes and values) and academic standards expected from students upon completion of their degrees. It also aims to materialize global competition and strengthen the applied facets of the disciplines.

1.3.2. Aims of the Programme

On completion of their Master's Degree Programme, students of geography will:

- Have a strong understanding of philosophy, methodology and subject matter of geography and its subfields.
- Have a thorough understanding of the earth's natural ecosystem, including landforms, oceans, weather, climate, seasons, soils, irrigation, and so on.
- Comprehend the evolution of human groups' relationships with their physical environment, as well as the growth of inter regional linkages as influenced by geographical circumstances.
- Know and apply the geographical research approaches along with geoinformatics, cartography and statistical analysis.
- Develop the ability to collect and analyze geographical data in such a way that it contributes to a better understanding of spatial phenomena and subsequent implementation of the analysis outcomes.
- Become the human resource, resolving the problems at hand, especially the ones related to disaster management, regional planning and environmental issues.
- Develop the ability to critically analyze seemingly universal models of thought, value orientations, and practices.

1.4 Qualification Descriptors (Possible Career Pathways)

The qualification descriptors for the M.Sc. programme in geography shall include learning attributes such as understanding, communication, expansion and application of subject knowledge with a clear understanding of one's location. This also involves awareness among the students' part of differences pertaining to class, caste, gender, community, region, etc. in order that they can transcend these differences with transparency of purpose and thought. The key qualification descriptor for M.Sc. Geography shall be clarity of concepts as well as critical thinking and their practical use. Each Post Graduate in geography should be able to:

- (a) Demonstrate a coherent and systematic knowledge and understanding of the field of geography and theoretical developments in this field in the world context. This would also include the student's ability to identify, speak and write about genres, forms, periods, movements and conventions of geography as well as the ability to understand and engage with critical concepts and theories.
- (b) *Demonstrate* the ability to understand the role of nature and its associating factors in a changing world from the disciplinary perspective as well as in relation to its professional and everyday use. While the aspect of disciplinary attribute is covered by the ability of the students to read data with close attention to themes, conventions, contexts and value systems, a key aspect of this attribute is to understand different parameters which directly or indirectly affecting dynamics of earth surface features.
- (c) *Demonstrate* the ability to think and relate different processes which occurs on earth surface.
- (d) Communicate ideas, opinions and values—both traditional values and values of life in all shades and shapes—in order to expand the knowledge of the subject as it moves from the classroom to real life world.
- (e) *Demonstrate* the ability to share the results of academic and disciplinary learning through different forms of communication such as essays, dissertations, reports, findings, notes, etc., on different platforms of communication such as the classroom, conferences, seminars, workshops, the media and the internet.
- (f) *Recognize* the scope of geography through geospatial techniques and values in terms of career opportunities, employment and lifelong engagement in teaching, publishing, translation, communication, media, soft skills and other allied fields.
- (g) Apply subject-specific skills in society to foster a larger sense of ethical and moral

(1) Mehtos/ (1) 2021 Manual 13/19/201

responsibility among fellow humans in order to see and respect differences in and among various species and life-forms and learn to transcend them.

- (h) Communicate the results of studies undertaken in an academic field accurately in a range of different contexts using the main concept, constructs and techniques of the subjects of the study.
- (i) *Apply* one's disciplinary knowledge and transferable skills to new/unfamiliar contexts and to identify and analyze problems and issues and seek solutions to real-life problems.
- (j) *Use* knowledge, understanding and skills for critical assessment of a wide range of ideas and complex problems and issues relating to the chosen field of study.
- (k) Demonstrate skills in identifying information needs, collection of relevant quantitative and/or qualitative data drawing on a wide range of sources, analysis and interpretation of data using methodologies as appropriate to the subject(s) for formulating evidencebased solutions and arguments.
- Address one's own learning needs relating to current and emerging areas of study, making use of research, development and professional materials as appropriate, including those related to new frontiers of knowledge.

The programme will strengthen the student's ability to draw on narratives that alert us to layers and levels of meaning and differences in situations and complexities of relations. Linguistic and Cultural competence should help the students identify, analyze and evaluate key issues in the text and around in the world—thematic, contextual, professional, processual and think of ways to find acceptable and sustainable solutions. Students will have the ability to understand and articulate with clarity and critical thinking one's position in the world.

Student has an option to pursue a Post Graduate degree in geography where the fundamentals of the subject and academic achievements are understood and conceived by him. Also, the teachers will be benefited as they shall have to keep abreast with latest developments, discoveries, research methodologies and application of various other disciplines in the subject.

1.4.1 Possible Career Pathways

The geography as a subject is concerned with the study of the earth, with its physical and cultural characteristics distributed and placed, the interrelationship between them and human life and the various phenomenon's of the earth. In this discipline, the

an Mehtos (2, 2, 2) Manual 13/9/2014

9

relationships between people and the environment are examined. A degree in geography from the Central University of Haryana opens many new doors in terms of your career choices. Our expertise in physical geography and other geospatial techniques will enable our students to pursue a career in much of this vast field. This section looks at some of the careers chosen by geographers and gives information about what the jobs can involve. Some of the important career options are listed here –

- Teaching
- Research & Development
- Urban and Regional Planners
- Cartographers
- GIS Specialists
- Non-Governmental and Community based Startups
- Environmental Managers
- Disaster Management Experts
- Surveyors
- Draftsmen
- Climatologists
- Meteorologists
- Transport and Tourism Consultant
- Demographers

2. PROGRAMME OUTCOMES (POs)

Students enrolled in the Master's Programmes offered by the Departments under the School of Basic Sciences will have the opportunity to learn and master the following components in addition to attain important essential skills and abilities:

PO-NO.	COMPONENT	OUTCOMES				
PO-1	Basic Knowledge	Capable of delivering basic disciplinary knowledge gained during the programme.				
PO-2	In-depth Knowledge	Capable of describing advanced knowledge gained during the programme.				
PO-3	Critical thinking and Problem-Solving abilities	Capable of analyzing the results critically and applying acquired knowledge to solve the problems.				
PO-4	Creativity and innovation	d Capable to identify, formulate, investigate and analyze the scientific problems and innovatively to design and create products and solutions to real life problems.				
PO-5	Research aptitude and global competency	Ability to develop a research aptitude and apply knowledge to find the solution of burning research problems in the concerned and associated fields at global level.				
PO-6	Holistic and multidisciplinary education	Ability to gain knowledge with the holistic and multidisciplinary approach across the fields.				
PO-7	Skills enhancement	Learn specific sets of disciplinary or multidisciplinary skills and advanced techniques and apply them for betterment of mankind.				
PO-8	Leadership and Teamwork abilities	Ability to learn and work in a group and capable of leading a team even.				
PO-9	Environmental and human health awareness	Learn important aspects associated with environmental and human health. Ability to develop eco-friendly technologies.				
PO-10	Ethical thinking and social awareness	Inculcate the professional and ethical attitude and ability to relate with social problems.				
PO-11	Lifelong learning skills and Entrepreneurship	ng Ability to learn lifelong learning skills which ar				

3. PROGRAMME SPECIFIC OUTCOMES (PSOs)

The post-graduate students shall be able to realise the following specific outcomes by the end of programmme:

NUMBER	PROGRAMME SPECIFIC OUTCOMES
PSO-1	The evolution of geography and its branches over time, as well as the
	relevance of geographical studies and central places in today's world.
PSO-2	Information and analysis of the earth's surface, its internal characteristics
	that change over time, and conceptual understanding of climate, including
	its spatial and temporal variation and impact on humans.
PSO-3	A deep knowledge of hydrology along with comprehensive understanding
	of important concept of the oceanic movements, waves, currents, tides,
	and other marine resources, as well as human-ocean interaction.
PSO-4	The patterns and consequences of rural-urban linkages will aid in
	understanding the process of rurbanisation as well as population attributes,
	and their spatio-temporal trends.
PSO-5	Developing a deep understanding of the concept of society its components
	and determinant to ensure balanced and sustainable regional development
	and planning in India.
PSO-6	Exploring the field and collecting data, as well as analyzing, computing,
	and presenting the data using a variety of statistical and geo-spatial tools
	and techniques. Using appropriate research methodology tools will make
	studies more detailed and comprehensive.
PSO-7	Concept of disaster and hazards, their impacts and mitigation strategies
	and development of Early Warning System by using geo spatial
	techniques will strengthen the understanding of Human Environmental
DCO 0	Relationship.
PSO-8	Comprehensive understanding of environment, its components and
	developing an idea about climate change as a major driver of various contemporary environmental issues.
DCO A	
PSO-9	Detailed understanding of geology, physiography, climate, drainage,
	vegetation, soils, people and natural resource management of India.
D CO 10	
PSO-10	Detailed understanding of the challenges that Indian agriculture faces in order to maintain sustainable productivity and ansure homogeneous rural
	order to maintain sustainable productivity and ensure homogeneous rural development and human well-being.
D CC 11	
PSO-11	Understanding the political and economic structures as a growth factor for
	both developing and developed countries.
PSO-12	After introducing various research paradigms, research attitude of the
	students will be developed through minor research project work.

4. POSTGRADUATE ATTRIBUTES

NUMBER	P.G. ATTRIBUTES
PGA-1	Disciplinary Knowledge: Broad understanding of historical development of
	various branches of geography
PGA-2	A detailed overview of some key concepts in climate, hydrology, oceanic
	movements and resources, and human-ocean interaction, as well as a study of
	its spatio-temporal impact on humans using various geospatial techniques.
PGA-3	Gain an understanding of the major theoretical perspectives and debates
	within evolution of geographical thought, how these have affected our views
	of the past, and how they may be applied in current world.
PGA-4	Understanding the concept of regional planning and rurbanisation during the
	phase of India's political evolution in order to overcome global geopolitical
	challenges.
PGA-5	The importance of central places in ensuring the region's homogeneous
	development and interdisciplinary human growth.
PGA-6	Understanding the major issues and barriers that the various sectors of
	economy face as well as the solutions that can be used to ensure long-term
	productivity and economic growth, which is a crucial element in national
	development.
PGA-7	Detailed understanding of Indian geography as a whole.
PGA-8	Students' research aptitude and analytical skills are developed by exploring
	the field for data collection, analysis, computation, and representation using
	various statistical techniques.

BACKGROUND OF GIS	
[Course Outcome (s) No.: 1 & 2]	
Definitions and Component of GIS: Historical	
I Development of GIS; Sources of GIS Data: Spatial and 15	
Non-Spatial; GIS Data Models: Raster and Vector Data Model; Coordinate Systems: Datum and Map	
Projection.	
DATABASE MANAGEMENT SYSTEM	
[Course Outcome (s) No.: 3]	
II Attribute Data in GIS: Types of Attribute Tables, 15	
Database Management System; Database Model- Relational Model; Types and Methods of Overlay;	
Buffering.

9. TEACHING-LEARNING PROCESS

Teaching - learning process is aimed at capacitating learners to achieve the determined learning results corresponding to the courses of programmes. This may include lectures followed by Q&A session or group discussion, practical work, use of prescribed textbooks, electronic resources and other self-study materials, project work, which may be individual or team-based, activities devoted to subject-specific and interdisciplinary skills development, internship and visits to industrial or other research facilities etc.

The result-based method, especially in the frame of Master's programme in geography, expects an important change from teacher-centric to learner-centric education and from passive to participatory instructions. Preparation for teaching comes to be crucial. Practical abilities, together with realization of interconnection between theory and experimentation, make up a significant phase of the teaching-learning method. Teaching plans, directed by such a framework, consist of lectures assisted by tutorials; field-based education; use of prescribed reading materials and other self-study materials; project work, some of which may be team-based; activities conceived to serve the development of subject related abilities; internship and visits to field sites, and other research means.

The faculty should promote learning on a proportionate scale of including lectures (listening/hearing), laboratory (scientific analysis and experiments) and field-based (collecting/participating). In order to achieve its objective of focused process based learning and holistic development, a variety of knowledge delivery methods will be used like:

- Lectures
- Discussions
- Simulations
- Role Playing
- Participative Learning
- Interactive Sessions
- Seminars
- Research-based Learning/Dissertation or Project Work
- Technology-embedded Learning

10. IMPLEMENTATION OF BLENDED LEARNING

Blended Learning is a pedagogical approach that combines face to-face classroom methods with computer-mediated activities in the process of teaching and learning. It implies nice

85

blend of face-to-face and online activities to make the learning processes more interesting and engaging. It focuses on integration of traditional classroom activities and innovative ICTenabled strategies. It emphasises student-centric learning environment where the teacher is the facilitator for productive and measurable learning outcomes. It optimises and compliments the face-to-face learning, giving ample freedom and flexibility to the students and teachers to access and explore the wide range of open-access sources such as video lectures, podcasts, recordings and articles through digital platforms. It gives freedom and autonomy to the teachers in selection of appropriate digital platforms, resources and timeslots to complement and supplement face to face learning. The Blended Learning doesn't undermine the role of the teacher, rather it gives him/her an opportunity to explore the unexplored in accordance with the requirements of the curriculum.

Key features of Blended Learning

- **Student-Centric Pedagogical Approach** focusing on flexibility in timing, quality content, needs and interests of students and freedom to study through the mode of his/her choice;
- Freedom to Select variety of mediums and techniques;
- Increased student engagement in learning;
- Enhanced teacher and student interaction;
- Improved student learning outcomes;
- More flexible teaching and learning environment;
- More responsive for self and continuous learning;
- Better opportunities for experiential learning;
- Increased learning skills;
- Greater access to information, improved satisfaction and learning outcomes.

Note: Resolution no (c) as per minutes circulated by VC office: It was resolved that Blended Learning with 40% component of online teaching and 60% face to face classes for each programme, be adopted

11. ASSESSMENT AND EVALUATION

A variety of assessment methods that are appropriate within a given disciplinary area and a programme of study will be used. Priority will be accorded to formative assessment. Learning outcomes will be assessed using techniques such as the following: time-constrained examinations, closed-book and open-book tests, problem-based assignments, practical assignments, laboratory reports, observation of practical skills, individual project reports (case study reports), team project reports, oral presentations, seminar presentation, viva voce interviews, computerized adaptive testing, peer and self-assessment, etc. For Geography course the methods of assessment shall include the following:

- Continuous Comprehensive Evaluation at regular after achievement of each Courselevel learning outcome
- Formative Assessment on the basis of activities of a learner throughout the programme instead of one-time assessment
- Oral Examinations to test presentation and communication skills
- Open Book Examination for better understanding and application of the knowledge acquired
- Group Examinations on Problem solving exercises
- Seminar Presentations
- Review of Literature
- Collaborative Assignments
