

Notice

With the spread of COVID-19, we generally use hand sanitisers which contain up to 70% alcohol which are highly flammable in nature and some recent media reports have shown as to how it is important to be careful while applying hand-sanitisers. The news articles titled **“Haryana Man Burns himself while Using Hand Sanitiser in the Kitchen”** and **“Haryana Man Suffers Burns after Using Alcohol-based Sanitiser Near Kitchen Fire”** dated 31st March 2020 published in *The Hindustan Times* and *Deccan Herald* respectively highlight the trauma of a person who was seriously burnt while using the hand sanitizer close to kitchen flames.

Therefore, all the students, staff and residents of the University are hereby advised to maintain precautions while applying the hand sanitisers and they should ensure that their hands are dry before they enter the kitchen. For more details, you may read the news article published in *The Hindustan Times* and *Deccan Herald*.

This is being issued in the interest of all concerned.
